Spa treatment in Mariánské Lázně

Five stars spa

Mariánské Lázně is a five star spa:

- ★ since 2023 it has the status of 'climatic spa'
- ★ more than 40 mineral springs rise here, where the best known is the Rudolf Spring
- ★ the most unique one is the natural medicinal Maria's gas, which contains 99.7 % of natural CO₂
- ★ medicinal treatments are provided from the local natural medicinal resources; especially water carbonated baths – mineral baths
- ★ membership of the World Cultural and Natural Heritage UNESCO – 'Great Spa Towns of Europe'

Spa treatments

Mariánské Lázně is a natural carbon dioxide spa. Carbon dioxide is used in three forms:

- water carbonated baths – mineral baths
- dry carbonated baths
- gas injections

These three treatments are the best-known treatments in Mariánské Lázně and they create the base of the spa cure. Another treatment, which uses carbon dioxide, is the unique Maria's pool in hotel Maria Spa.

More than 40 mineral springs rise in Mariánské Lázně, which is the world rarity. These springs are used for traditional water carbonated baths – mineral baths or for mineral water drinking treatments. With mineral water drinking treatments, other minerals contained in mineral springs play an important role and can help influence the success of the treatment.

A whole range of various treatments are provided during the spa cure, for example various types of massages, peat wraps, inhalations, medical rehabilitation, physiotherapy and water treatment.

UNESCO and climatic spa

Since 2021, Mariánské Lázně has belonged amongst eleven spa towns, which are registered on the List of the World Cultural and Natural Heritage UNESCO – 'Great Spa Towns of Europe'.

In 2023, Mariánské Lázně was declared a **climatic spa**, by the decision of the Ministry of Health.

Indications:

- **Kidney and urinary tract diseases**
all types of kidney stones, inflammation of the urinary tract, prostate gland and post-surgery conditions
- **Locomotor system diseases**
vertebrogenic syndrome (backaches), arthrosis of large joints, conditions after orthopaedic surgeries including joint replacements and spine surgeries
- **Respiratory tract diseases**
chronic bronchitis, asthma bronchiolae and conditions after respiratory tract surgeries
- **Metabolic diseases**
gout and diabetes mellitus (diabetes) with complications
- **Neurologic diseases**
Parkinson disease and nerve root irritation syndrome
- **Oncologic diseases**
spa treatment of patients after completed oncologic treatment
- **Digestive system diseases**
diseases of the gallbladder, stomach, pancreas and intestines
- **Circulatory system diseases**
hypertense and ischaemic heart disease

Contraindications:

- **gravidity**
- **acute infection diseases**
- **malignant tumour under treatment**
- **serious heart diseases**
- **alcohol and other drugs addictions**
- **epilepsy**

NATURAL MEDICINAL RESOURCES

Mineral springs

More than 40 mineral springs rise in Mariánské Lázně. The significant difference in their chemical composition makes it possible to influence a wide range of diseases of various organs through mineral water drinking treatments. The amount of mineral water prescribed for the drinking treatments varies according to diagnosis and a patient's condition. The drinking treatment is always set by the attending physician. Mineral springs are also used for mineral baths and inhalations.

Natural medicinal gas CO₂

Maria's gas is in reality a strong gas discharge (99.7 % natural CO₂).

This gas, called Maria's gas, is exclusively used for treatments only in the Ensana company's hotels. It is applied in the form of dry carbonated baths, gas injections and a completely new form is the Maria's gas pool combined with oxygen therapy.

Peloids – peat

It refers to peat. This treatment is thermically very demanding and requires caution in patients with hypertension, heart diseases and also elderly people. Peat wraps could be taken only with a doctor's agreement.

Medicinal climate – climatotherapy

The location of Mariánské Lázně at an altitude of 630 metres above sea level, which corresponds to the submontane climate, is very important in the treatment of respiratory diseases.

In 2023, Mariánské Lázně was declared a climatic spa by the Ministry of Health.

TREATMENTS

USING CARBON DIOXIDE

Mineral water carbonated baths

Mineral carbonated baths are a bath in mineral water at the temperature 34 °C. Carbon dioxide from the mineral water is absorbed by the skin into the body, decreasing blood pressure, improving heart activity and improving microcirculation. Mineral carbonated baths are suitable for relaxation and stress relief.

Dry carbonated baths

We use the so-called Maria's gas for this treatment. It is natural carbon dioxide of volcanic origin. Clients are placed into a plastic sack, which is closed just below the breasts and into which the carbon dioxide is pumped. The carbon dioxide is absorbed by the skin and improves blood circulation throughout the whole body, which means more oxygen goes to the brain, heart and lower limbs. These dry carbonated baths also improve sexual functions, especially with men.

Gas injections

They are a subcutaneous application of Maria's gas, a natural carbon dioxide, in the areas of the large joints and spine. This treatment has many remarkable effects including pain release, improved blood circulation to certain areas and the acceleration of healing.

Maria's pool

During this unique treatment we use an original pool where guests sit emerged up to their waists into the natural CO₂, which we gain directly from Maria's Spring. The treatment is combined with oxygen therapy and accompanied by relaxation effects. The traditional method of this treatment dates back to 1905. The treatment improves blood circulation throughout the whole body, improves the oxygen saturation of haemoglobin, which helps cell regeneration and thus leads to a reduction of the aging process, the so called anti-aging effect.

OTHER TREATMENTS

Mineral water drinking cure

An important part of a spa cure is mineral water drinking treatments. All mineral springs rising here are cold acidulous mineral springs with temperatures varying between 7-10 °C. They differ from each other in their chemical composition, some of them like day and night. The drinking treatment is usually carried out before meals and the amount of mineral water is prescribed by a physician.

Peat wraps

They are used for treating locomotor system disorders, because they intensively heat the body. Peat, at the temperature 38-42 °C, is applied to the body. The peat wraps are thermally very demanding treatment, and we must be careful with clients with hypertension, heart diseases and elderly people. This treatment can only be prescribed by a doctor.

Inhalations

For inhalations we use the Forest Spring in Mariánské Lázně. During inhalation process the medicine is inhaled directly into the respiratory tract and lungs, where it helps to dilute mucus and cleanse the respiratory system. Inhalations are effective for treating chronic breathing problems, allergies or the effects of colds and infections of the respiratory tract.

Massages

A massage is one of the most popular spa treatments. We use massages especially to treat locomotor system disorders. We have a whole range of various massages available for clients.

Physiotherapy

A wide range of medical rehabilitation and physiotherapy is provided in the spas.
